
Diabetes Health Indicators

Content

1 Introduction

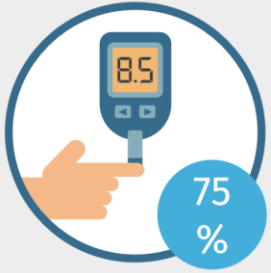
2 Tools

3 EDA
Exploratory data analysis

4 Modeling

5 Conclusion

Introducation



Diabetes

one of the most prevalent chronic diseases in the world, afflicting millions of People each year and imposing a significant financial burden on the economy..

Infection Rate

34.2M

AREAS AFFECTED

Kidney

Heart

Sight

Ears

Feet

Brain

Diabetes Data

Dataset

The dataset is contains **254000 observation** , each has **22 features**.

Columns and Target

High blood

High Cholesterol

Heart Attack

General Health

Body mass index (BMI)

Difficulty Walking

Target variable ; Diabetes_binary

Goal

predict diabetes using health indicators

To develop and evaluate machine learning models that can predict the likelihood of diabetes in individuals based on a range of health-related indicators

Tools

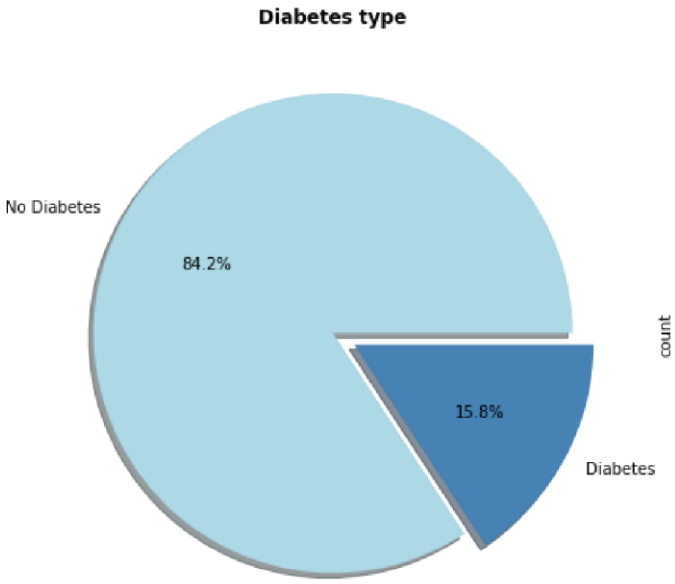
Cleaning Process

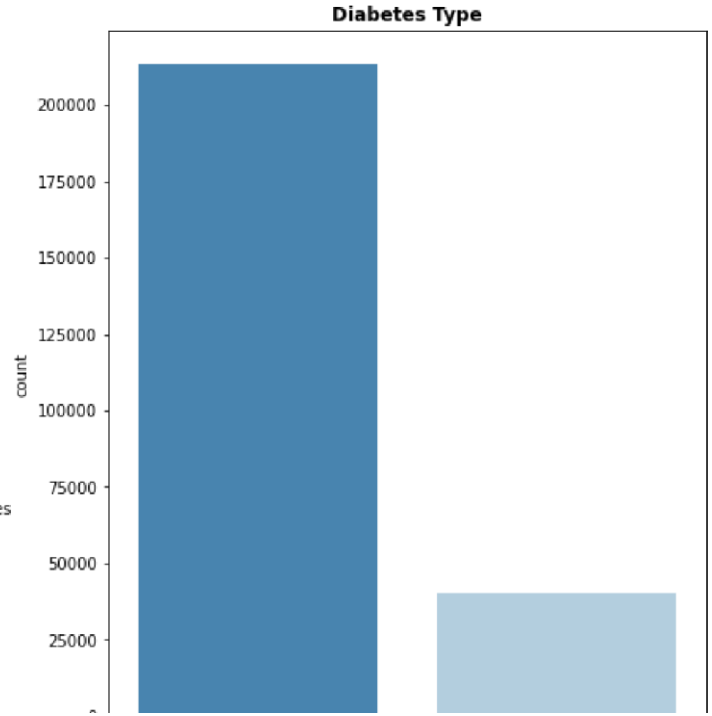
- Check Duplicates
- Check Nulls
- Rename Columns
- Remove outlier
- Value conversion

Note : After cleaning , the data is clean and there are no missing values

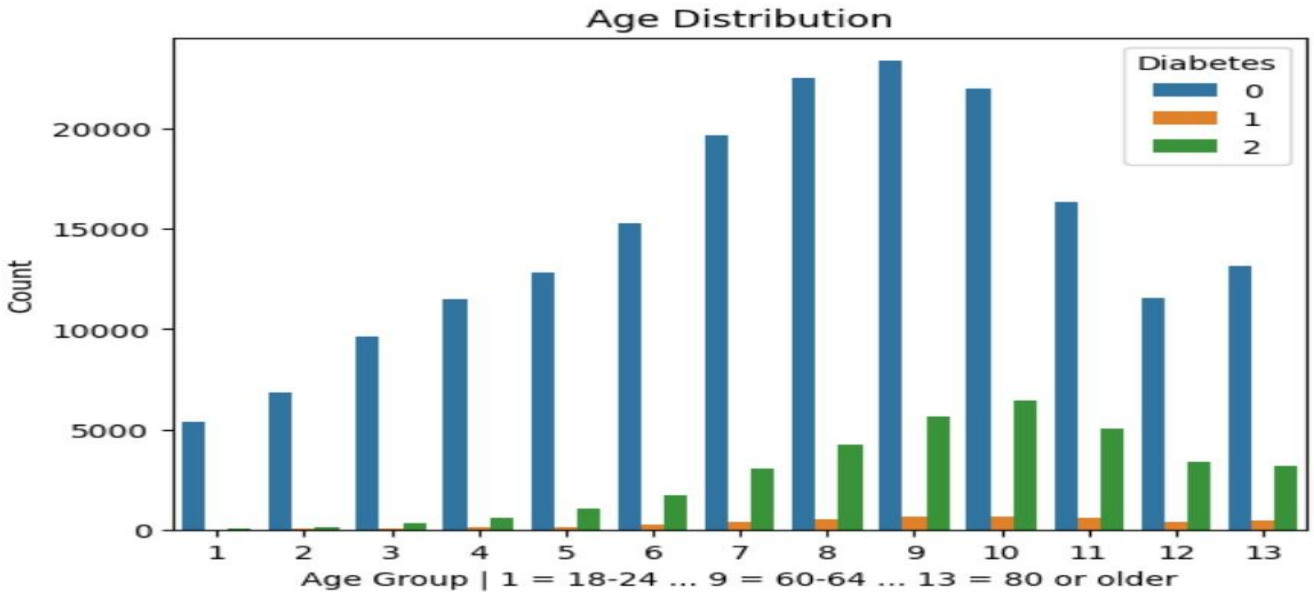
Visualization

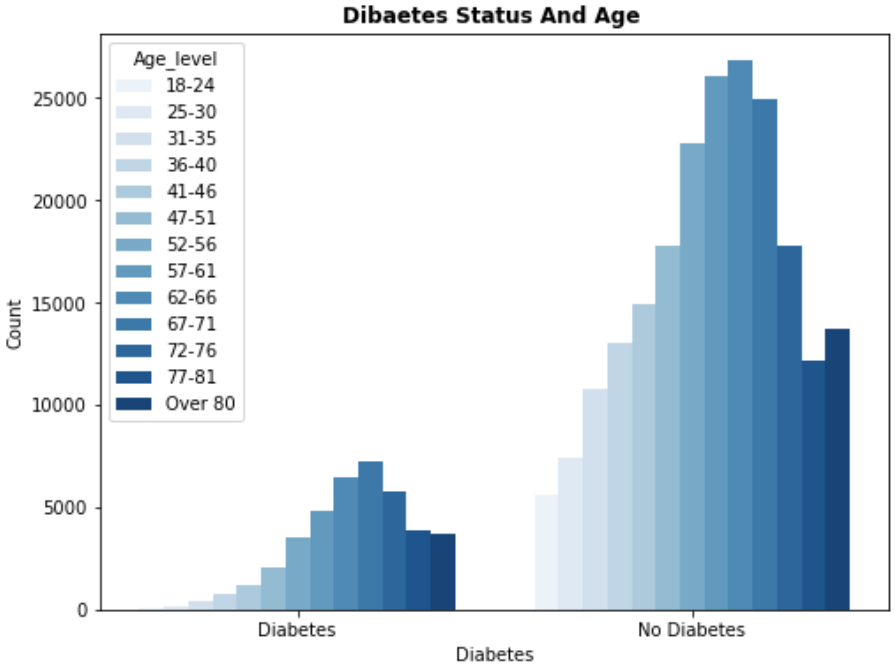
Diabetes Type

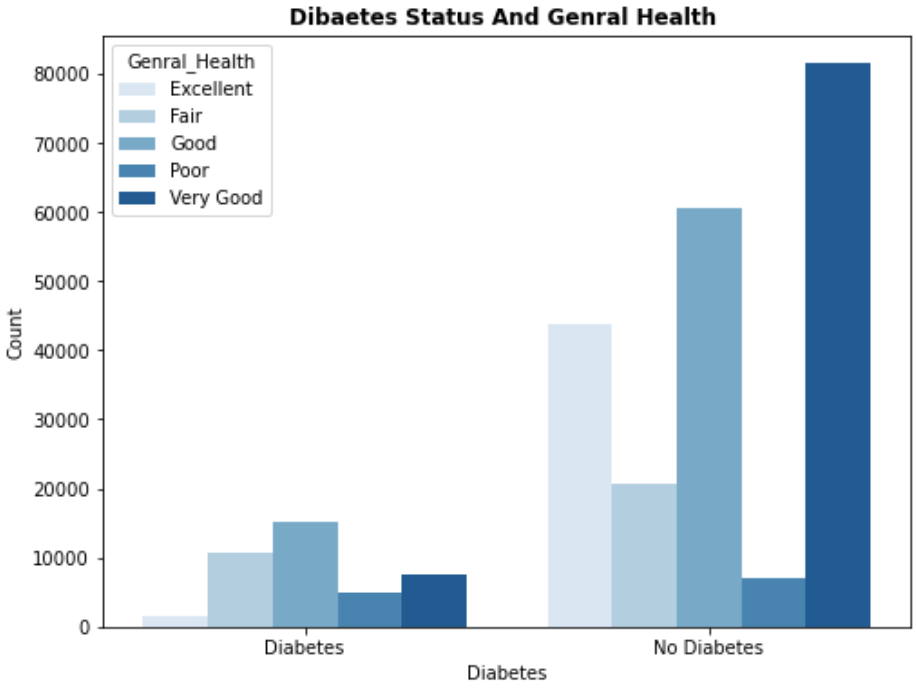


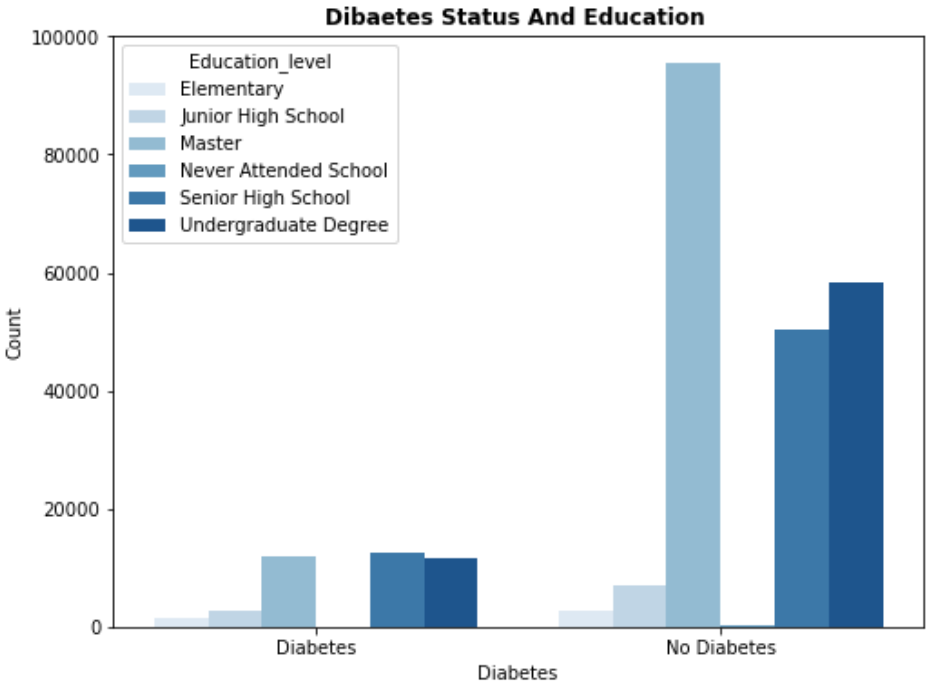


Distribution Age





Disease or Attack & Sex




General Health & Education
